<redacted_date> <redacted_url> HERITAGE STATEMENT

Application Site: 17 Foundry Court, Doncaster, ZZ25 1WD Proposal: Conversion of first floor and attic to a self-contained flat (including removal of unauthorised roller shutter)

1. Heritage Context 17 Foundry Court, Doncaster, ZZ25 1WD lies within the Doncaster Town Centre Conservation Area, an area recognised for its historic commercial street frontage character and traditional architectural form. The surrounding buildings are predominantly historic retail and mixed-use premises with active ground-floor frontages and residential or commercial accommodation above. Although the building is not listed, it contributes to the established rhythm, scale and traditional commercial character of Silver Street through its proportion, roof form and fenestration pattern.

2. Significance of the Building and Setting The site's key heritage significance lies in its substantial contribution to the historic streetscape, particularly in maintaining traditional commercial appearance, vertical proportions, and architectural simplicity typical of the Doncaster town centre core. Active street frontage and traditional shopfront or window treatment form an essential part of the wider conservation area character.

3. Assessment of Proposed Works The proposal relates solely to the internal conversion of the existing first and attic floors to form a self-contained flat. These internal works will not alter the external appearance or visibility of the building within the conservation area. Externally, a Black four panel door will be installed (as on attached picture) . And it is confirmed that the unauthorised roller shutter installed on the frontage will be removed. This will positively enhance the building's appearance, restoring compliance with the expected visual character for Silver Street as defined in local conservation guidance. No materials, openings, or external additions are proposed that would adversely affect the appearance or architectural integrity of the building or wider conservation area.

4. Impact on Heritage Significance The proposal will have no adverse impact on the conservation area. Conversely, the removal of the roller shutter will improve the visual quality of the frontage and contribute positively to the character and appearance of the conservation area. The proposal is therefore considered to be entirely consistent with Section 72 of the Planning (Listed Buildings and Conservation Areas) Act <redacted_date>, and compliant with the National Planning Policy Framework (NPPF, paragraphs 194–208), ensuring preservation and slight enhancement of the heritage asset. <redacted_organisation>

<redacted_date> <redacted_url> 5. Conclusion The development will preserve and modestly enhance the character and appearance of the Doncaster Town Centre Conservation Area. The removal of the unauthorised roller shutter as part of the works will restore an appropriate traditional frontage, significantly enhancing the building's appearance. The proposal is therefore not only acceptable in heritage terms but also in complete accordance with relevant local and national planning policy, providing reassurance of its commitment to heritage preservation.
