

Additional Plans Information Policy Justification

91.48267.FUL Land Adjacent Tranmoor Roseacre House, Barnby Dun, Doncaster, ZZ38 5BX Policy Justification to answer the officer's concerns point-by-point and demonstrate clear compliance with Policy 25 Part 4 (A–D) and NPPF paragraphs 88– 89. 1. Purpose and Need for the Building (Policy 25 Part 4A / NPPF 88–89) The proposed barn is required to serve two genuine rural economic functions:

1. Secure storage of valuable classic and heritage vehicles These vehicles form part of a small-scale rural enterprise involving the care, protection and preservation of historic vehicles. The business model is based on long-term secure storage, winter lay-up, light conservation and occasional maintenance. This activity cannot reasonably be accommodated within domestic buildings or on-site urban units without undermining its viability, security and practicality. The rural location provides:

- Space for safe vehicle manoeuvring and loading;
- A low-disturbance environment suitable for long-term storage;
- Proximity to land and buildings already in the applicant's control, reducing travel and operational costs.

2. Winter storage of hay for ponies and horses kept on the associated grazing land and elsewhere locally in DMBC area– The site lies within an established rural setting characterised by equestrian and agricultural activity. The barn will provide essential dry, vermin-proof storage for hay and fodder, ensuring continuity of animal welfare through winter months. This is a rural support function, linked to the land.

These uses directly align with NPPF paragraph 88, which supports “the development and diversification of agricultural and other land-based rural businesses” and paragraph 89, which encourages “a prosperous rural economy” through appropriate rural enterprise. The building is therefore not proposed just to “retain site value”, but to enable viable rural economic activity that is location-dependent and operationally tied to the land.

2. Site Context and Loss of the Former Barn Historically, a barn existed on the site and served agricultural storage purposes. The current proposal is a like-for-like functional replacement, reinstating a traditional rural building on its established footprint and access. The proposal therefore restores the working character of the site rather than introducing an urbanising use. In spatial and visual terms, it reinstates what has historically stood on the site. 3. Scale and Floorspace (Policy 25 Part 4C) The proposed barn measures approximately 190m² as shown on the submitted plans. This scale is:

- Commensurate with the former agricultural building;
- Typical of small rural storage barns in the locality;
- The minimum necessary to accommodate:

- A limited number of classic vehicles with safe circulation space;
- Segregated secure bays;
- A dedicated dry zone for hay storage.

The building's size is therefore function-led.

The simple rectangular form, timber cladding and agricultural roof profile ensure the structure reads as a traditional rural barn, fully consistent with its countryside context. 4. Impact on Rural Character and Amenity (Policy 25 Part 4B & D) The building is sited adjacent to existing access and development, avoiding encroachment into open fields. Materials (timber cladding and profiled roofing) are agricultural in character. There is no retail, visitor use or high-intensity activity. Movements are limited and sporadic, reflecting storage rather than active commercial processing. No external lighting or yard sprawl is proposed.

The proposal therefore preserves the openness and character of the countryside while re-establishing a functional rural building.

The proposal satisfies Policy 25 Part 4 in full: Conclusion

The proposed barn is not speculative development. It is a functional, proportionate replacement of a former rural building, enabling two legitimate countryside-based uses that are inherently rural in nature: heritage vehicle storage and agricultural fodder storage. It directly supports rural enterprise and reinstates a traditional barn form within an established rural plot. As such, it accords with Policy 25 Part 4 A–D, the Rural Development SPD, and NPPF paragraphs 88–89, and should be regarded as compliant in principle.
