

Consultation Reply Waste Recycling

PLANNING CONSULTATION RESPONSE Application No: 97.61549.FUL Proposal: Conversion of C3 dwelling to C4 5 bed HMO Address: 68 Brookfield Lane, Hexthorpe, Doncaster, ZZ54 0FT Consultee: Waste and Recycling Consultation assessment and justification: I have reviewed the documents associated with this application and I provide the following comments on behalf of Waste and Recycling. Ensuring there is suitable provision for the storage and collection of waste and recycling on new developments (and redevelopments) is a fundamental component of residential site design. Local Plan Policy 44b (10) notes that housing proposals will be supported where they make satisfactory arrangements for the storage and collection of waste and recycling. The same applies to Houses in Multiple Occupation (HMOs), Policy 9b requires that “external communal areas and facilities are of sufficient size and standard to satisfactorily accommodate waste and recycling bins”. Doncaster Council operates a standard alternate weekly waste and recycling collection service whereby each residential dwelling liable for Council Tax is entitled to receive the same level of service.

Waste container provision is calculated on the basis that each dwelling receives the following storage capacity each fortnightly cycle: Container Type Bin Size Purpose Black wheeled bin 240 litre Non-recyclable waste Blue wheeled bin 240 litre Mixed dry recyclables Green wheeled bin* 240 litre Garden waste Green box 55 litre Glass bottles * Excluded for homes/apartments without private gardens. The standard service model operates such that we collect non-recyclable waste (Black bins) on alternate weeks to recyclable / compostable waste (Blue bins, Green bins, Green boxes). Households receive a Black 240 litre bin for the storage and collection of non-recyclable waste: - Shredded paper and windowed envelopes - Broken / sheet glass - Food waste / soiled food packaging - Nappies and sanitary products - Plastic pots, tubs, trays and film - Liquid food cartons (Tetra/Pure Pak) Households receive a Blue 240 litre bin for the storage and collection of mixed dry recyclable materials (items must be empty / clean): - Plastic bottles - Cardboard, paper, newspapers, magazines - Steel and Aluminium cans, clean Aluminium foil, empty aerosols Households receive a Green 55 litre box for the storage and collection of container glass: - Glass bottles - Glass jars Households (with private gardens) receive a Green 240 litre bin for the storage and collection of compostable garden waste: - Grass cuttings, leaf-fall - Hedge clippings, tree and shrub prunings - Flowers, small plants and non-invasive weeds Waste containers may not be stored permanently on the highway. A suitably sized storage location within the premise boundary is a pre-requisite for all new developments and redevelopment proposals – we recommend an area of hard-standing is provided for this purpose. Bin storage areas should be conveniently located for the occupants of the dwelling and should enable free movement of wheeled containers to the designated collection point over smooth continuous surfaces - gradients between the storage area and collection point should be no more than 1:12 with no steps, kerbs or obstructions along the route. HMOs generally remain eligible for the same level of service as traditional forms of housing. The Council may elect to provide an additional 240 litre black bin for large HMO's where appropriate, an additional blue bin may also be provided (at the Councils' discretion) where effective separation of recyclable materials can be demonstrated in accordance with service guidance - the quality of recyclable materials placed out for collection must be maintained to a high standard. The HMO manager is responsible for making additional arrangements for excess waste produced by their tenants where the Council's standard service provision (and any discretionary provision) prove inadequate. Any request for further additional capacity provision will be dealt with as a commercial agreement, with charges levied for collections. The plans show the proposed arrangements for waste / recycling bin storage and / or the arrangements (including access routes) for the placement of bins in an accessible location for collection in the rear alleyway. The HMO manager is responsible for arranging the movement of bins to the collection point (at the curtilage) on collection day. Bins should not be stored in a position that would cause unacceptable fire hazard, noise, odour or any other nuisance. They should not be placed on fire escape routes, they must not cause obstruction, nor be easily obstructed, preventing free movement of bins for collection purposes. Bins / bin storage areas should not be visually detrimental to the locality, nor located on, or immediately adjacent to, a public footpath or highway. The location of any bin storage area must be within the ownership of the building owner (or if not, have a legal agreement drawn up to permit the use in perpetuity). Where necessary, bins should be kept in a self-contained structure. This should allow comfortable access to all bins inside it without needing to move one to access another. If the bin store is external, it should be accessed by a key / keypad to prevent unauthorised access. Bin stores should be at least 1.8m high and can be a close boarded vertical (external treated) timber fencing construction or brick wall (or similar). Doorways of bin stores should have double doors opening outwards and shall provide a clearance of 1.54m minimum (including door thickness), positioned so as to enable the removal and replacement of bins without being obstructed. Where a bin store is integrated within the development building, it should be accessed directly from outside in the open air, with appropriate fire separation from the building and means of escape, fire detection and be properly ventilated. The HMO manager must submit a waste management plan

for approval alongside their application for planning permission. The approved plan must be implemented in full whilst the development is occupied, so as to ensure a designated person / body keeps the storage area clean, free from uncontained waste and pests and to facilitate any other actions necessary to ensure the waste storage area is properly managed and maintained. Doncaster Council charges a fee for the delivery of bins to households, current Fees and Charges can be found on the Council's website:
