### SITE AND HERITAGE CONTEXT

The site is a fictional dwelling close to a traditional frontage within a synthetic conservation setting. The host building, detached garage and mature garden edge are described only for dataset variety.

No real heritage asset, real address, real photograph or real conservation record is reproduced.

### PROPOSAL SUMMARY

The proposal comprises an open-sided pitched-roof car port beside the existing garage. The drawing pack records roof pitch, eaves height, ridge height, timber post positions and boundary distances.

### DESIGN APPROACH

Materials are shown as stained timber, dark shingle roof and black rainwater goods. The form is intended to read as a light domestic outbuilding rather than a fully enclosed extension.

The structure is set back from the principal frontage and is annotated against the garage elevation to help assess scale and visual relationship.

### SETTING AND LANDSCAPE

Existing trees are shown indicatively with a protection zone. Garden boundaries, driveway surfacing and the garage door alignment are shown on the site plan.
